

AUTOMOTIVE SEAT MANUFACTURING

Concentrated Intelligence in a Seat

Automotive seats are more than...just a seat. They are a major inspirational element and a key influencer on a vehicle purchase. They're also complex, smart devices that connect people to their cars, trucks and SUVs.

The evolution from imagination to reality, takes teamwork. Working with our OEM customers, the Tachi-S team of designers, engineers, prototype artists, testing experts and plant assembly personnel collaborate with efficiency and consistency, to integrate seat components, structures, mechanisms, foam, fabric, and trim. **The result is a highly-functional, comfortable, quality seat**...and extremely satisfied vehicle owners.

JUST-IN-TIME MANUFACTURING

From Our Plant To Yours

In addition to our global footprint, Tachi-S currently has Just-in-time (JIT), trim, welding, pour-in-place foam, frame, component and R&D facilities throughout North America.

As a flexible seating supplier, we are prepared to expand this footprint, as needed, to satisfy and execute new automotive seating projects throughout the U.S. and Mexico.
